Using Sign Language with Baby

Book: I Love You Everyday

Limited research suggests that baby sign language might give a typically developing child a way to communicate several months earlier than those who only use vocal communication. This might help ease frustration between ages 8 months and 2 years — when children begin to know what they want, need and feel but don't necessarily have the verbal skills to express themselves.

(Mayo Clinic)

Tips:

Keep signs simple
Make it interactive
Stay patient
